

PHILIP MORRIS U.S.A.
INTEROFFICE CORRESPONDENCE
Richmond, Virginia

To: Dr. M. A. Sarkar

Date: January 2, 2003

From: Jennifer Amador

Subject: Review articles on the use of genomic or proteomic methods to detect early lung cancer in humans

I initially ran a search in Medline (1966-2003) using the following search strategy:

lung neoplasms[mh] OR carcinoma, small cell[mh] OR carcinoma, non-small cell lung[mh] OR carcinoma, large cell[mh] AND (genomics[mh] OR proteomics[mh] OR biological markers[mh]) AND (early OR susceptib*)

The results were limited to review article on humans and a total of 97 articles were identified.
The citations without abstracts are attached for your review.

I then searched the Current Contents database (1996-2003) using the search strategy:

(lung cancer or lung neoplasms) and (proteomics or genomics or biomarker\$) and early

I did not limit this search to review articles. An additional 77 unique citations are also attached.

If you need additional assistance, please email or call me at 4-4854
